PROFILE SUMMARY

B.Tech 4th-year student (AI & Data Science, 9.1 CGPA) with proven ability to ship end-to-end AI systems — from ML image classification pipelines to full-stack web applications. Smart India Hackathon 2025 Finalist out of 50,000+ teams nationwide. Comfortable working across the stack: Python ML backends, and SQL databases. Looking for an internship where I can contribute to real AI/DS problems from day one.

EXPERIENCE & PROJECTS

Smart India Hackathon 2025 Finalist

Dec 2025

Tech Stack: Python (FastAPI backend), JavaScript (React.js), PostgreSQL, Redis

- Designed an AI-powered train traffic control system to maximize section throughput — selected as a national finalist from 50,000+ participants across India.
- Built full-stack solution with FastAPI backend, React.js frontend, and Redis caching; responsible for the ML scheduling logic and system architecture.

NUTRIVERSE – AI-Powered Malnutrition Detection

Apr 2025

Tech Stack: Python, Machine Learning, Arduino, Firebase, OpenCV

- Built a real-time child malnutrition detection system using ML image classification — achieved functional prototype tested on 200+ sample images.
- Integrated software with Arduino-based physical toys ('Khanak AI' rattle and 'NutriWheel AI') to create an engaging data-collection experience for children.
- Won Best Presentation Award at TECHFEST 2025, competing against 80+ project teams.

LearnNex Powered by Wipro Training & Internship

Jul-Sep 2025

Tech Stack: Python & its libraries, EDA, Data Preprocessing, Data Analysis

- Completed a Data Analytics Training & Internship at LearnNex (Powered by Wipro), gaining hands-on experience in Python libraries - Numpy & Pandas, data cleaning, visualization, statistical analysis, SQL, MS Excel, and Power BI.
- Developed data-driven solutions through real-world projects, including customer churn prediction and time series forecasting.

Customer Churn Prediction System

Aug 2025

Tech Stack: Python, XGBoost, LightGBM, Logistic Regression, SHAP, FastAPI, EDA, Feature Engineering

- Performed end-to-end EDA and data preprocessing on customer dataset — handled missing values, encoded categorical features, and engineered predictive features to improve model signal.

TECHNICAL SKILLS

ML & AI: Python, Scikit-learn, XGBoost, LightGBM, Logistic Regression, ML fundamentals, model building

LLM & Retrieval: LLM usage (offline), Prompt Engineering, RAG, LangChain-style retrieval, vector embeddings

Data & EDA: EDA, Data Preprocessing, Feature Engineering, NumPy, Pandas, Matplotlib, Power BI, Excel

Databases: SQL, MySQL, Redis

Frameworks: FastAPI, React.js, Firebase, Arduino, OpenCV

EDUCATION

World College of Technology & Management, Gurugram, Haryana

- Bachelor of Technology 2023-2027 (Present)
- Artificial Intelligence and Data Science-

9.1 CGPA

Royal Public Sr. Sec. School, Gurugram, Haryana

Higher Secondary 2022-2023 (CBSE)

- PCM-83%

Secondary 2020-2021 (CBSE)

- Aggregate-97%

ADDITIONAL SKILLS

- Awarded as **Best Presenter**
- Languages:** English, Hindi

- Effective Communicator
- Leadership Skills and Team Collaborator**
